DETAILED ACTION

Specification

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (f) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (l) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 26-30 are rejected under 35 U.S.C. 102(b) as being anticipated by **Rierson (5,100,314)**. **Rierson** discloses a baking furnace (8) including a refractory lined kiln (30) having a plurality of heating zones (34, 38) in a linear path, wherein green bodies (pellets) packed in a sacrificial medium (coal, SEE column 8, lines 33-51) and strengthen the pellets by baking before being discharged from the kiln, zone (38) reduces the pellets of volatile compounds.

Claims 26, 27, 30, 39, 44, and 52 are rejected under 35 U.S.C. 102(e) as being anticipated by **Linga et al (6,042,801)**. **Linga et al** discloses a method for baking carbon bodies in a linear furnace chamber having one or more individual chambers (SEE claim 1) and includes carbon bodies surrounded by a packing material (chamotte stone of 6-25 mm) in a furnace (refractory lined is considered well known in the art) prior to baking through the furnace, the packing material absorbs volatile components during the baking before the material is discharged.

Claims 26-32 and 35 are rejected under 35 U.S.C. 102(b) as being anticipated by **Holdner (4,253,823)**. **Holdner** discloses a furnace having a refractory wall structure surrounding several linear vertical pits (11) (ie: heating zones) wherein anode bodies are packed with packing material (17) and displaced in the pits under gravity and baked to drive out volatile matters, it then undergoes higher heating by way of burners (32 & 33). **Holdner** furthermore includes guides (19) used to position the carbon bodies within the baking path.

Allowable Subject Matter

Claims 33, 34, 36-38, 40-43, 45-51, 53, and 54 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
